Examiner: Sterling, Amy Jo

Page 2 of 5

IN THE CLAIMS:

1. (currently amended) An assemblage comprising:

an electrical connector having a <u>metal</u> body with a tubular projection having a push-through portion having a first diameter and an engaging portion having a second diameter larger than said first diameter;

and a <u>metal</u> support having a major part that is substantially rigid and includes an aperture formed by a plurality of deflectable spokes, said aperture having a center opening with a third diameter greater than said first diameter and less than said second diameter, whereby said tubular projection push-through portion slides through said aperture and said spokes engage said second diameter of said engaging portion and mount said electrical connector with said support.

- 2. (original) The assemblage of Claim 1 wherein a stop associated with said second diameter limits the amount of movement possible for said support.
- 3. (original) The assemblage of Claim 2 wherein said spokes of said support diverge away from the plane of said major part of said support.
